Notification Process

Problem Statement

✳ Provide a measure of accountability

✳ Implement use of notification for changes to data

►New POC type for ASN, NET and ORG

►New process for POC

http://www.arin.net/mailing_lists/dbwg/0404.html

American Registry for Internet Numbers

ASN, NET & ORG

✳ Create three new POC types

►Notify (NT): confirmation or returned mail for successful or failed attempts to modify data

►Notify Accept (NA): confirmation for successful attempt to modify data

►Notify Reject (NR): returned mail for failed attempts to modify data

Costs

* Minor modifications to:
  * ►Templates
  * ►Database
  * ►Registration software
  * ►WHOIS software
* Educating community
* Could be implemented within 30 days

Should ARIN Proceed?

✳ Do we need all three POC types?

✳ Display POC in WHOIS?

►Never

►Always

►Don't display Org contacts on resource display

►Display handle/e-mail address only

POC

* If mailbox is deleted/modified for an existing POC, deleted/modified mailbox is cc'ed

* Should we proceed?

* On successful, failed, or both?
