

A Comprehensive Proposal for Whois Data

Leo Bicknell

ARIN AC

It's Long!

- The proposal can be found in your packet.
- It's Long!
- It was written before the NRPM.
 - It will need to be rewritten to better fit with the NRPM, but for discussion I left it using old policy terms since most are more familiar with those terms.

The Problem

- Many proposals only make sense if other proposals are passed.
 - Multiple proposals all lose over the fear that only one will be passed.
 - Those writing proposals rarely “team” with those writing other proposals for multi-prong issues.

Solution

- Put it all in one proposal.
 - But, it's hard to pass.
- I'm going to try anyway, since I'm crazy.
- Please review before the break.

Break

Objectives

- Balance
- Emphasis on high value data.
 - Some low value data may be interesting, but the overhead to maintain it is too high.
- Provides an enforcement option.
- Detailed Definitions

Feedback

- None.
 - Not quite true, three people with general comments.
- Is no feedback a sign of acceptance, rejection, or simple ambivalence?

Please Comment

- When?
 - Right now.
- In particular, if you like it, please say so.
- Unless someone points out major issues I will have a rewritten version of this (geared to the NRPM) for the next meeting.

Thank You!
