

IPv6 Event

Mark Kosters
CTO

Agenda

- **Using the wiki and playing with V6**
- **What you can do yourself**
 - Using IPv6 with NAT-PT – Darren Kara
 - Using IPv6 with a Tunnel Broker – Matt Ryanczak
- **What ISPs are doing today**
 - A Dive into IPv6 Implementation for ISP's - Is it that deep? – Aaron Hughes
 - Dual-prong Approach: IPv6 and Dual-stack Lite
 - Alain Durand/Yiu Lee

What to do

- Register yourself in the ARIN wiki
- **<http://www.getipv6.info>**
- Follow the login/create account button on the top right to register
- Look at the content on the site
- **http://www.getipv6.info/index.php/IPv6_at_ARIN_XXIII**
- Add your own comments

What to do, con't

- Read the handout – join the IPv6 specific networks
- Fix your various environments (eg enable IPv6 in firefox)
- Confirm you have joined
 - Look at your interfaces
 - Ping the nameserver - ping6 2001:500:30:11::1
- Start surfing
- Try various IPv6 enabled sites:
 - www.arin.net
 - ipv6.ctu.int
 - ww.getipv6.info
 - ipv6.google.com

What to do, con't

- Start using some of your other tools that you normally use
- **Document what works and what is broken**
- Don't be afraid to ask questions
